Response to Amendment

1. Based on applicant's amendment, filed 8/7/2007, see page 16 through 18 of the remarks, with respect to cancellation of claims 6 and 17, and amended claims 1, 11-12, 20, 25 and 28-34, have been fully considered and are persuasive, upon further consideration the rejection, of 103(a) for claims 1-5, 7-16 and 18-34, are hereby withdrawn.

The claims 1-5, 7-16 and 18-34 now renumbered as 1-32 are allowed.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to a computer-based 3D imaging method for a wireless endoscope unit.

Based on applicant's amendment, with respect to claim 1 representing claims 12, 25 and 29-30, the closest prior art of record (Yokoi and Johnson), Yokoi reference is directed to a capsule endoscope that is swallowed in order to examine interior regions of a living body, and Johnson reference is anatomical modeling of the human body with a computer, and more particularly to a computerized system for analyzing tubular structures of the human body such as the digestive tract of a living person for detecting colorectal polyps. But do not teach or suggest, among other things, “

calculating distance squares ($d_{2ij} = d_2(X_{mi}'X_{rj})$) between the image parameters, stored in the form of N-dimensional feature vectors (X_{mi}), of recorded individual images with the image parameters, stored in the form of N-dimensional reference vectors (X_{ri}), of images of diseased tissue structures from a reference image database by calculating the square of the Euclidean length of their difference vectors, and determining the reference vectors (X_{ri}) of the reference images whose distance squares (d_{2ij}) are a minimum in relation to the respective feature vectors (X_{mi}) of the individual images to be examined”.

Additionally claim 11 representative of claims 28 and 31-34, the closest prior art of record (Yokoi and Johnson) do not teach or suggest, among other things, "with each I-th recording, the position of the endoscope unit is detected and transmitted together with the image data to the reception device and evaluation device and is digitally stored therein, i being a whole number greater than or equal to one, and the evaluation device is configured to carry out an image processing procedure for concatenation of individual images, wherein the concatenation of two individual images (m, n), includes using the path difference, covered by the capsule-type endoscope unit and loaded with a weighting factor, between the instantaneous recording positions (X_m , X_n) of the unit for recording the two individual images (m, n)".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Yokoi and Johnson) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
